1. Lab report submission

a. For labs 1-5, due date: 11:59pm 16 September, Report name format: studentid_firstname_labs1_5**.pdf**
b. For labs 6-9, due date: 11:59pm 14 October, Report name format: studentid_firstname_labs6_9**.pdf**
c. Never ever submit your first report in the last few minutes in case the network breaks. Note that late penalties will apply. If you require an extension, then you must apply for special consideration. If you have UAAP with assessment extensions, you should also email us. The maximum extension request for a period is up to 7 calendar days.
d. The Turnitin submission portal for the report will open soon on LMS (A separate announcement will be sent). You can submit your report multiple times until the deadline. If you submit it by the deadline, you cannot resubmit it after the deadline. If you submit it for the first time after the deadline, you cannot resubmit it: this rule also applies to submissions with approved extensions, i.e., they can only be submitted once after the deadline.
e. The feature of similarity report will be enabled so that you will receive feedback on the similarity of your report when submitting it multiple times. If your similarity is high (i.e., no less than 50%), you should check your similarity report from LMS, revise and resubmit your report by the deadline.
f. For a late submission: a penalty of 5% of the marks allocated for labs 1-5 or labs 6-9 is deducted per day for the first 7 calendar days after which the submission is not accepted. Each 24-hour block is recorded from the time the submission is due.

2. Marking Criteria:

a. A structured presentation (15%).
b. Clear step-by-step with detailed description (85%).

a. A structured presentation (15%)

Categories	Excellent	Medium	Bad
	15%: A structured presentation with excellent cohesion and clear signposting.	**8%:** A structured presentation with acceptable cohesion and signposting.	**3%:** An unstructured/poorly presented presentation.

For a given report, its presentation as a whole will be marked via its format, clarity, structure, grammar, etc. For example, if a report's presentation as a whole is Excellent, then its presentation is 15%.

Key criteria are listed as follows:

a. You MUST use the markdown template file (CITS5503_Template_Labs1-5.md and CITS5503_Template_Labs6-9.md provided here) to prepare a report and export it as a PDF for submission (It is fine to include more subheadings for a lab when necessary). Otherwise, the presentation will be marked as Bad. (You can use Typora as your markdown editor, which has a 15-day trial. Any other markdown editor such as Obsidian should also work).

b. For labs 1-5, submit a report as a PDF with no more than 80 pages. For labs 6-9, submit a report as a PDF with no more than 70 pages. Otherwise, the presentation will be marked as Bad.

c. The submitted PDF's name must follow the aforementioned naming format. Otherwise, the presentation will be marked as Bad.

d. Ensure clear signposting through the use of multi-level headings, indents, dot points, bolding, etc.

e. Ensure consistency in font, spacing, margins, etc.

f. Keep your writing clear and concise (e.g., spelling and grammar).

f. Ensure clear screenshots/pictures are used.

Note: Examples of Excellent, Medium and Bad presentations are included in Example_Presentation.pdf (available here).

b. Clear and detailed step-by-step description (85%)

Categories	Excellent	Good	Average	Bad
	85%: Clear and detailed description of all steps including comprehensive rationales behind all key steps with few to no minor errors.	**65%:** Clear and detailed description of most steps including well explained rationales behind most key steps with some minor errors.	**45%:** Insufficient description of half of the steps. Some rationales are provided, but they are not well explained or contain many minor or some major errors.	**25%:** Unclear and insufficient description of steps, resulting in significant confusion. Little to none rationales are provided or rationales contain many major errors.

Given a description of a lab, it is categorized as one of the 4 codes above and graded via its corresponding percentage. After a lab's description is graded, the final mark can be calculated (An example is provided here).

Key criteria are listed as follows:

a. For any lab needing EC2 instance(s), their instance type must be t2.micro and instance names must start with your student number (For students in eu-north-1, use t3.micro as t2.micro is not available). If you create a single instance, follow the naming format of <student number>-vm (e.g., 24242424-vm). If you create multiple ones, follow the naming format of <student number>-vm1 and <student number>-vm2 (e.g., 24242424-vm1, 24242424-vm2). Otherwise, the description of the corresponding lab will be marked as bad.

b. For any lab needing EC2 instance(s), the instance(s) must reside in the AWS region mapped to your student number (the mapping is provided below and also in lab 1). Otherwise, the description of the corresponding lab will be marked as bad.

c. For any lab needing EC2 instance(s), the last step must be about manually terminating the instance(s) without using commands or scripts, that is, log into the AWS EC2 console and terminate them. Otherwise, the description of the corresponding lab will be marked as bad.

d. Explain step-by-step in detail how a lab is completed.

e. For details of a given step, they include:

- What you have done in a step.
- Rationales especially for key steps.
- If you use any items for the first time in your report such as commands (including their options), tools, websites, concepts, policies, configuration files, code, explanations are MUST. If they have been explained in previous labs, they can be referenced in subsequent labs. For example, since creating an EC2 instance is detailed in lab 2, subsequent labs can refer to lab 2 for relevant description.
- Take screenshots when necessary to assist the step description.
- Delete AWS resources as noted when a lab is done.

Note: Examples of Excellent, Good, Average and Bad descriptions are included in Example_Description.pdf (available here).

3. AWS resources (saving costs)

a. Look up your AWS region name according to your student number and allocate your AWS resources based on the region name.

Student Number	Region	Region Name	ami id
20666666 – 22980000	US East (N. Virginia)	us-east-1	ami-0a0e5d9c7acc336f1
22984000 – 23370000	Asia Pacific (Tokyo)	ap-northeast-1	ami-0162fe8bfebb6ea16
23400000 – 23798000	Asia Pacific (Seoul)	ap-northeast-2	ami-056a29f2eddc40520
23799000 – 23863700	Asia Pacific (Osaka)	ap-northeast-3	ami-0a70c5266db4a6202
23864000 – 23902200	Asia Pacific (Mumbai)	ap-south-1	ami-0c2af51e265bd5e0e

23904000 – 23946000	Asia Pacific (Singapore)	ap-southeast-1	ami-0497a974f8d5dcef8
23946100 – 24024000	Asia Pacific (Sydney)	ap-southeast-2	ami-0375ab65ee943a2a6
24025000 – 24071000	Canada (Central)	ca-central-1	ami-048ddca51ab3229ab
24071100 – 24141000	Europe (Frankfurt)	eu-central-1	ami-07652eda1fbad7432
24143000 – 24700000	Europe (Stockholm)	eu-north-1	ami-07a0715df72e58928

b. When a lab is done, its AWS resources must be deleted/terminated manually from the AWS console (by students).
c. Every EC2 instance will be stopped at 10pm every night (by students) and deleted/terminated at the same time every Friday night (by staffs). You can start your instance(s) after 7am every morning. If you are detected 3 times by creating/starting your instances between 10pm-7am, you will be locked out of the AWS service by staffs and then you have to create your own AWS account using your own credit card.
d. The maximum number of EC2 instances required for a lab is 2. Therefore, do not have more than 2 instances simultaneously. Otherwise, instances of a student ID from the oldest to the newest will be deleted/terminated every night at 10:00pm until the instance number is reduced to 2.
e. Lab 5 requires application load balancers (ALBs). Every ALB and its related resources such as listeners will be deleted at 10pm every night (by staffs). You can create your ALB after 7am every morning. If you are detected 3 times by creating your ALB between 10pm-7am, you will be locked out of the AWS service by staffs and then you have to create your own AWS account using your own credit card.
